Plant-Wide Network & EPABX Solution

Fibre, copper and Cisco Layer-3 connectivity for a new manufacturing plant

**GREENFIELD PLANT DELIVERY**

PROJECT PROFILE

Client: Bostik India Pvt. Ltd. | Location: Jhagadia, Bharuch, Gujarat

PROJECT AT A GLANCE

Rapid infrastructure readiness for a new plant

Bostik required a dependable communications foundation for its new Jhagadia plant. D-TECH translated the requirement into a coordinated fibre, copper, Cisco Layer-3 and EPABX solution—from survey and bill of material through installation and commissioning.

Network + EPABX delivery

Business requirement

- Establish plant-wide fibre and copper connectivity for operational users and systems.
- Create a Layer-3 switching foundation using Cisco technology for controlled network communication.
- Meet an urgent implementation schedule and extend the solution to plant telephony through an EPABX system.

D-TECH VALUE PROPOSITION

D-TECH combined technical survey, practical bill-of-material design, OEM expediting, site execution and commissioning—reducing coordination points during an urgent greenfield rollout.

DESIGNED AS ONE COORDINATED SYSTEM

One delivery path from survey to commissioned services

The assignment was structured as a complete infrastructure engagement, with the network design and EPABX requirement handled through a common technical and commercial team.

FIBRE BACKBONE

Plant-wide optical-fibre connectivity designed from the surveyed route and operational requirement.

COPPER ACCESS

Structured copper network for local device and user connectivity across the facility.

LAYER-3 NETWORK

Cisco Layer-3 switching to provide the active network foundation and routing capability.

EPABX SYSTEM

Plant telephony scope proposed and delivered as a follow-on requirement within the same relationship.

EXECUTION BUILT AROUND CONTINUITY AND CONTROL

Speed through coordinated survey, sourcing and execution

The recorded project timeline was enabled by fast conversion of site requirements into a practical bill of material, accelerated OEM coordination and prompt deployment of the installation team.

Challenge-to-response matrix

Delivery consideration	D-TECH response
Urgent plant-readiness requirement	Expedited material from the OEM and began installation within one week of order receipt.
Multi-technology scope	Coordinated fibre, copper, Cisco Layer-3 networking and EPABX through one delivery structure.
Requirement clarity	Conducted a full-site survey with sales and technical teams and validated needs with the customer's IT representative.
Schedule control	Managed sourcing, installation and commissioning to complete the recorded scope within one month.

Value embedded in the delivery model

SPEED

Survey-to-install coordination shortened the path from requirement to site activity.

ACCOUNTABILITY

One partner managed passive, active and telephony workstreams.

COLLABORATION

Strong customer-team support enabled efficient access and execution.

All statements reflect the supplied project record; no modelled ROI or unverified KPI has been added.

FROM INSTALLATION SCOPE TO OPERATIONAL VALUE

Plant connectivity delivered within the required timeframe

The engagement established the essential network and voice communications foundation for the new plant and demonstrated D-TECH's ability to mobilize quickly without fragmenting responsibility across multiple vendors.

PLANT READINESS

Core fibre, copper and switching infrastructure was installed and commissioned for the new facility.

TIMELY DELIVERY

The source record confirms mobilization within one week and overall completion within one month.

SINGLE-PARTNER DELIVERY

Networking and EPABX requirements were handled through one accountable solution partner.

EXTENSIBLE FOUNDATION

The Layer-3 network creates a structured base for future users, devices and plant applications.

WHY THIS PROJECT MATTERS

This project shows how early survey discipline, an accurate bill of material and coordinated OEM/site execution can convert an urgent greenfield requirement into an operational communications platform.

A foundation designed to be supportable, scalable and ready for the next requirement.
