FOUR VERIFIED AMC RECORDS | NETWORK + ENDPOINT + SERVER SUPPORT

GNFC work orders dated 11 Feb 2014, 13 May 2015, 1 Jun 2016 and 30 May 2017 | Commercial values omitted

01 | BUSINESS CONTEXT

A Distributed, Mixed-Generation IT Estate

Support responsibility from user desk to virtual infrastructure

GNFC required dependable support across its factory premises, TDI complex, township, corporate building, laboratories, project facilities and training locations. The estate combined legacy desktops, software support, active network devices, fiber-linked infrastructure and Dell servers connected to EMC SAN storage within a VMware environment.

SCALE & DIVERSITY

More than 1,500 PC hardware line items, 1,434 software-support units, distributed network locations and mission-critical servers.

INDUSTRIAL REQUIREMENT

Plant-wide access, safety procedures, standby spares, disciplined reporting and after-hours response were integral to delivery.

What GNFC mandated

- On-site comprehensive network maintenance across multiple GNFC campus locations.
- A 12-engineer on-site support team, with substitute coverage maintained during absence.
- Help-desk complaint monitoring, field diagnosis, corrective maintenance and escalation.
- Asset tagging, location-wise inventory, cable identification and periodic reporting.
- Comprehensive Dell server support with OEM back-to-back coverage and on-site spares.
- 24x7 remote support for servers, four-hour attendance and 24-hour resolution expectation.

SERVICE MANDATE

Maintain business continuity through resident capability, preventive discipline, rapid restoration, spares readiness and accountable reporting.

02 | INTEGRATED COVERAGE

D-TECH Enterprise AMC Service Model

One accountable service layer across six operational towers

01 Network Operations

Switches, hubs, media converters, modems, fiber links, LAN connectivity and rack discipline.

02 PC Hardware

Comprehensive field support across legacy and Core 2 Duo desktop estates and connected peripherals.

03 Software Support

User software incidents, drivers, configuration, startup, printing and connectivity assistance.

04 Server & Virtualization

Eight Dell PowerEdge R610/R900/R910 servers linked to EMC SAN and VMware infrastructure.

05 Spares & Restoration

On-site/workshop spares, repair, replacement, and equivalent-or-higher substitution where required.

06 Governance & Safety

Complaint records, asset database, periodic analysis, PPE, gate-pass and industrial safety compliance.

03 | RELATIONSHIP PROOF

A Five-Year Documented Service Journey

Continuity expanded from plant networking to endpoint and server infrastructure

The supplied GNFC records show D-TECH support across the 2013-2018 period. The evidence demonstrates repeated trust and an expanding service footprint: network operations, PC hardware and software, and two consecutive Dell server AMC years, including an expressly documented renewal in 2017.

2013-14**NETWORK AMC**

Plant-wide network support | WO 7700007719

2015-16**PC HW + SW**

HO and TDI Dahej support | WO 7700009199

2016-17**DELL SERVERS**

8 servers + EMC SAN / VMware | WO 7700010368

2017-18**SERVER RENEWAL**

Renewed on same scope and terms | WO 7700011541

D-TECH EXPERIENCE SIGNAL

Enterprise AMC maturity means owning the complete service chain - people, process, spares, OEM coordination, documentation and safe execution.

Build a dependable AMC and FMS model for your enterprise.
