CONTRACT WINDOW

01 Oct 2026

through 31 May 2028 • 20 months

DEPLOYMENT

2 × L1 FMS

24×7 rotational shift coverage

THE DELIVERY PROMISE

Local response. Multi-level expertise. One accountable service rhythm.

Onsite engineers provide desktop, data-centre and help-desk support, with D-TECH's in-house L1/L2/L3 capability available for infrastructure escalation.

COMMERCIAL-SAFE PRESENTATION

This marketing edition intentionally excludes pricing, bank details, tax identifiers, signatures and other confidential contractual information.

OPERATIONAL IT SUPPORT WHERE AVAILABILITY AND DISCIPLINE MATTER.

An LNG terminal requires responsive user support and controlled data-centre operations—delivered inside a safety-led industrial environment.

01

Continuous coverage

Rotational shifts across all days, including Sundays and national holidays, as directed by the Engineer-in-Charge.

02

Plant-ready people

Pre-approved resources, medical fitness, police verification, identity control, PPE and safety compliance before deployment.

03

Technical breadth

Desktop, client software, mail, LAN/WAN, peripherals, servers, networking, security systems and data-centre environment.

04

Service continuity

Approved backup pool and replacement discipline to sustain authorized coverage during absence or leave.

“The strongest FMS model is a controlled operating system around the onsite engineer.”

D-TECH engagement principle

THREE SERVICE LANES. ONE ONSITE OPERATING MODEL.

The contracted scope connects day-to-day user productivity with controlled data-centre support and service-desk discipline.

DESKTOP SUPPORT

- OS and client-software installation, configuration and reloading
- Email, Internet, LAN/WAN, VPN and application availability

DATA-CENTRE SUPPORT

- Duty-hour monitoring of the data-centre environment and equipment
- Servers, switches, routers, firewall and security-equipment actions

HELP-DESK & CONTROL

- User issue intake, diagnosis, restoration and closure support
- Escalation to D-TECH's L1/L2/L3 technical organisation
- Documentation of

Capability behind the site team

In-house L1, L2 and L3 support for servers, operating systems, networking, backup and security systems.

reports

DESIGNED FOR RESPONSE, ESCALATION AND ACCOUNTABLE CLOSURE.

A simple governance structure keeps site activity close to users while preserving access to deeper technical expertise.

Continuity safeguard

Replacement is drawn from a pre-approved engineer pool—preserving authorized personnel standards and service continuity.

A CONTROLLED PATH FROM AWARD TO OPERATIONAL READINESS.

The mobilisation model converts contractual obligations into clear gates—people, safety, access, support and governance.

Readiness is more than joining date.

Verified capability, site access, safety compliance, approved backups and a known escalation path—before the first support request arrives.

WHAT THIS AWARD DEMONSTRATES ABOUT D-TECH.

A reference-ready operating pattern for industrial, energy, manufacturing and other business-critical sites.

INDUSTRIAL FIT

Ability to deploy inside a governed, safety-sensitive terminal environment.

FULL-STACK SUPPORT

Onsite desktop and data-centre coverage connected to L1/L2/L3 expertise.

CONTINUITY BY DESIGN

Rotational coverage and an approved backup resource model—not ad-hoc substitution.

AUDITABLE DELIVERY

Defined reporting, records, statutory compliance and client-led governance.
