ENTERPRISE TECHNOLOGY SUCCESS STORY

CASE STUDY

Turnkey IT Infrastructure for Pharmaceutical Operations

Secure, redundant and centrally managed enterprise infrastructure

PREPARED FOR

VEER PHARMA

IT Infrastructure Turnkey Project

DESIGNED & IMPLEMENTED BY D-TECH

A Complete Digital Foundation

A centralized, protected and highly available environment supporting business, plant, security and communication operations.

Veer Pharma required an end-to-end technology platform covering compute, storage, network, cybersecurity, wireless, surveillance, telephony and workforce management. D-TECH designed and implemented the environment as a unified turnkey project.

3

DELL SERVERS

10

SEGMENTED VLANS

8

WI-FI ACCESS POINTS

DESIGN UPTIME

Solution coverage

- Servers, SAN/NAS storage, VMware virtualization and high availability.
- Core/access switching, structured cabling, fiber backbone and segmented VLAN architecture.
- Firewall high availability, internet connectivity and controlled access.
- CCTV, IP-PBX, Wi-Fi, time attendance and access-control applications.

Modernize Without Compromising Control

01 Central management

Bring laptops, desktops, printers, servers, storage, applications and user access under one controlled environment.

02 Operational resilience

Reduce dependency on single backbone devices through redundant firewalls, switches, storage and virtualized hosts.

03 Security segmentation

Separate management, servers, laboratory, CCTV, access control, Wi-Fi, voice, data and security traffic.

04 Multi-system integration

Deliver networking, compute, security, surveillance, telephony and attendance as one coordinated program.

Layered, Resilient and Centrally Managed

USERS & ENDPOINTS

Business users, laboratory, guests, voice, CCTV and security devices

ACCESS & WIRELESS

Ten access switches, structured cabling, fiber links and eight access points

CORE & SECURITY

Dual core switching, Layer-2/Layer-3 routing and firewall high availability

COMPUTE & DATA

Three Dell PowerEdge hosts, VMware HA, SAN/NAS storage and backup

BUSINESS SERVICES

Domain, SAP, HANA, file, QC, email, antivirus, COSEC and vCenter

One Turnkey Program, Multiple Platforms

COMPUTE & VIRTUALIZATION

Dell PowerEdge R540/R440 servers, VMware ESXi and vCenter high availability.

DATA PROTECTION

Dell SAN, QNAP storage, RAID, storage LUNs and Veritas-managed backup jobs.

NETWORK & WI-FI

Dual core and ten access switches, VLAN/VRF, VLT/stacking, STP, static routing and Aruba Wi-Fi.

CYBERSECURITY

Firewall HA, internet-link termination, access policies and segmented internal traffic.

PHYSICAL SECURITY

IP CCTV, recording, camera positioning, time attendance and access-control devices.

COMMUNICATION

Matrix IP-PBX, SIP extensions, trunk routing and enterprise telephony services.

From Design to Commissioning

01

Discovery & engineering

Captured customer needs and created the end-to-end infrastructure design.

02

Passive infrastructure

Completed cable routing, racks, termination, labeling, dressing and fiber splicing.

03

Platform deployment

Installed servers, storage, switches, wireless, firewall, cameras, PBX and access devices.

04

Configuration & integration

Configured virtualization, VLANs, routing, security, applications, backup and user services.

05

Testing & handover

Validated hardware, connectivity, resilience and configurations, then documented the environment.

A Secure and Scalable IT Backbone

Centralized administration

Core systems, applications and infrastructure can be managed through a structured enterprise environment.

Higher availability

Redundant backbone technologies and VMware HA support continuity of critical workloads.

Stronger isolation

Ten VLANs separate key traffic categories and reduce unnecessary cross-network exposure.

Integrated operations

IT, security, communication and workforce systems operate on a coordinated foundation.

Protected data

SAN/NAS storage, RAID and backup services strengthen recoverability and data protection.

Expansion ready

The architecture provides a controlled path for additional users, devices, applications and plant needs.

INFRASTRUCTURE BUILT FOR GROWTH.

D-TECH designs and delivers reliable, secure and future-ready technology environments for modern enterprises.
